## Reference Letter

TradingView is pleased to provide this letter of recommendation for Yauheni Buinouski, who worked with us as a Middle Product DevOps Engineer in the Kubernitization team from July 2024 to June 2026.

During his time at the company, Yauheni proved himself to be a highly skilled, reliable, and proactive engineer. He made a significant contribution to the development and support of TradingView's infrastructure, helping ensure the stability, security, and scalability of the company's critical services.

In his role, Yauheni was responsible for the following:

1. Rapid identification and resolution of infrastructure issues to ensure stable system operation.
2. Deployment, configuration, and launch of new services and applications.
3. Designing, implementing, and maintaining CD pipelines for deployment automation.
4. Working with monitoring and logging tools to improve system reliability.
5. Collaborating with development teams to optimize deployment processes and infrastructure.
6. Supporting and improving the company's Kubernetes infrastructure.
7. Participating in the improvement of internal DevOps processes and infrastructure solutions.

Yauheni demonstrated strong hands-on experience with Kubernetes, AWS, and cloud infrastructure. He effectively used Terraform for infrastructure-as-code automation and alongside Helm and ArgoCD for GitOps-driven application deployments and continuous delivery.

He also showed strong Linux and system administration skills, confidently worked with Docker and containerized applications, used Bash for scripting and automation tasks, and applied Python to develop internal utilities and automate operational processes.

An additional advantage was his experience with multi-cluster solutions, Jenkins, and bare-metal Kubernetes environments.

As part of TradingView's DevOps organization — which include Kubernitization teams — Yauheni demonstrated a high level of ownership, responsibility, and collaboration. He worked effectively with colleagues, adapted quickly to new challenges, and consistently delivered reliable results even in complex technical environments.

Yauheni is an engineer who can be trusted with complex infrastructure challenges and mission-critical systems. He combines deep technical expertise, strong analytical thinking, and a proactive approach to problem-solving.

We confidently recommend Yauheni Buinouski as a strong DevOps Engineer and wish him continued professional success.

Sincerely,  
TradingView
